Packing List

Before you begin operating your PC, please make sure that the following materials have been shipped:

- 1 AEC-6950 Embedded Controller
- 1 Phoenix Power Connector
- 4 M3 x 4mm Screws
- 6 M4 x 8mm Screws
- 2 Wallmount Brackets
- 1 DVD-ROM for manual (in PDF format) and Drivers

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

Safety & Warranty

1. Read these safety instructions carefully.
2. Keep this user's manual for later reference.
3. Disconnect this equipment from any AC outlet before cleaning. Do not use liquid or spray detergents for cleaning. Use a damp cloth.
4. For pluggable equipment, the power outlet must be installed near the equipment and must be easily accessible.
5. Keep this equipment away from humidity.
6. Put this equipment on a firm surface during installation. Dropping it or letting it fall could cause damage.
7. The openings on the enclosure are for air convection. Protect the equipment from overheating. DO NOT COVER THE OPENINGS.
8. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.
9. Position the power cord so that people cannot step on it. Do not place anything over the power cord.
10. All cautions and warnings on the equipment should be noted.
11. If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient over-voltage.
12. Never pour any liquid into an opening. This could cause fire or electrical shock.
13. Never open the equipment. For safety reasons, only qualified service personnel should open the equipment.
14. If any of the following situations arises, get the equipment checked by service personnel:
 - a. The power cord or plug is damaged.
 - b. Liquid has penetrated into the equipment.
 - c. The equipment has been exposed to moisture.

- d. The equipment does not work well, or you cannot get it to work according to the user's manual.
 - e. The equipment has been dropped and damaged.
 - f. The equipment has obvious signs of breakage.
15. DO NOT LEAVE THIS EQUIPMENT IN AN ENVIRONMENT WHERE THE STORAGE TEMPERATURE IS BELOW -20°C (-4°F) OR ABOVE 70°C (158°F). IT MAY DAMAGE THE EQUIPMENT.

FCC

Warning!

This device complies with Part 15 FCC Rules.

Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received including interference that may cause undesired operation.

Caution:

There is a danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions and your local government's recycling or disposal directives.

Attention:

Il y a un risque d'explosion si la batterie est remplacée de façon incorrecte. Ne la remplacer qu'avec le même modèle ou équivalent recommandé par le constructeur. Recycler les batteries usées en accord avec les instructions du fabricant et les directives gouvernementales de recyclage.

General Information

1.1 Introduction

Due to the growing popularity from the IPC market, the newest Boxer series AEC-6950 has been introduced by AAEON. Being a control center, the AEC-6950 is suitable for Machine Control, Data Processing, Fleet Management, Data Management. AEC-6950 equips a high efficiency heat conduction mechanism.

The AEC-6950 is compact in size but has attractive and flexible extension capabilities such as 4 USB 2.0 ports and 2 USB 3.0 ports, VGA, Audio, 8 COM ports, and 2 PCI or PCI-E[x1].

Stable Design for Rugged Environment

The AEC-6950 is designed for rugged environments due to the following reasons; first, it can withstand tough vibration testing up to 3 g rms. With the anti-vibration hard drive device option, the AEC-6950 can be used in high vibration environments. In addition, the AEC-6950 offers low power consumption system that while operating in ambient temperatures ranging from -20° to 65°C with Intel® Atom™ D2550 processor.

The AEC-6950 is a standalone high performance controller designed for long-life operation and with high reliability. It can replace traditional methods and become the mainstream controller for the multimedia entertainment market.

1.2 Features

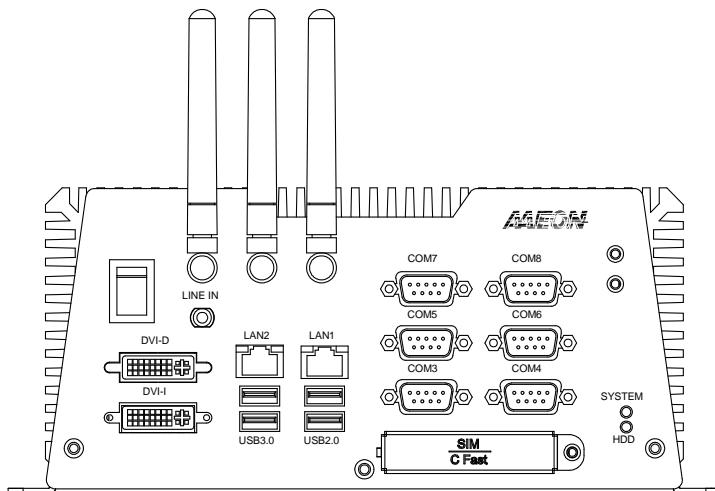

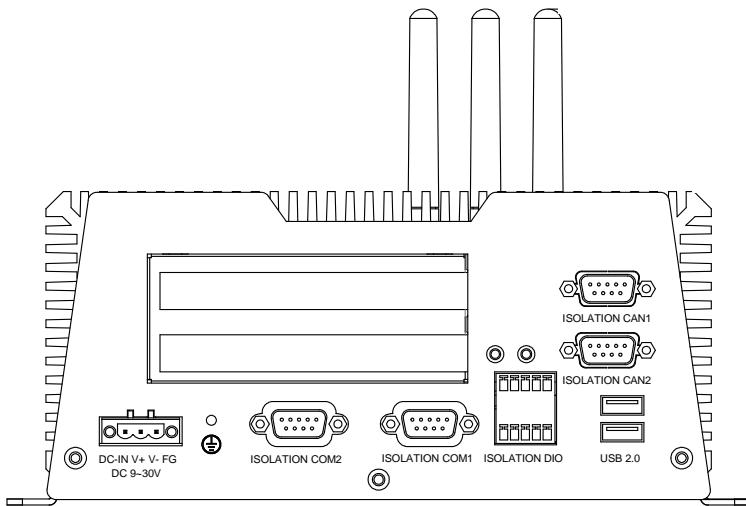

- Intel® Core™ i7-3517UE 1.7GHz Processor
- QM77 Chipset
- COM Module Integrated
- Isolation DI x 4 & DO x 4 (3KV)
- Isolation RS-232/422/485 x 2 (3KV)
- PCI x 2 or PCIe x 1/ PCIe x 16
- SIM Slot x 1 on the Mini PCI-E x 2
- Fanless Operation (-20°C ~ 50°C)

2.1 Jumpers and Connectors of Main Board

2.2 Dimension

2.3 List of Jumpers

The board has a number of jumpers that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

Label	Function
JP1	PEG Enable
JP3	RS-232/422/485 Selection (com1)
JP4	RS-232/422/485 Selection (com2)
JP5	LVDS Port Backlight Lightness Control Mode Selection

2.4 List of Connectors

The board has a number of connectors that allow you to configure your system to suit your application.

The table below shows the function of each of the board's connectors:

Label	Function
CN3	COM SLOT
CN4	DVI-I/DVI-D connector

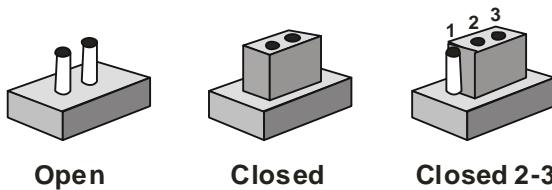

CN5	Mini Card Connector With external SIM
CN6	Mini Card Connector With on board SIM

CN33	4-pin ATX12V Power Connector
CN38	Front Panel Connector
CN39	AUDIO Connector

SATA1	SATA 3.0 Connector
SATA2	SATA2.0 Connector
FAN1	4-pin Fan Connector

2.5 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

A pair of needle-nose pliers may be helpful when working with jumpers.

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

2.30 PCI Card Installation

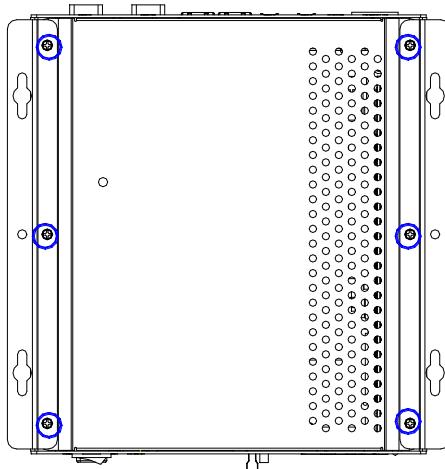

Step 1: Unfasten the screw on the rear panel.

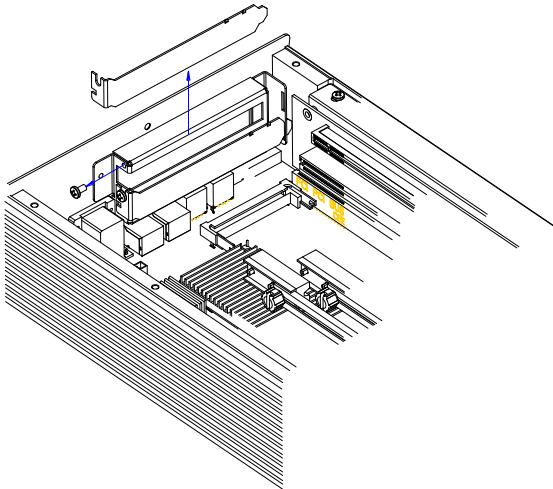

Step 2: Unfasten the screw on the front panel.

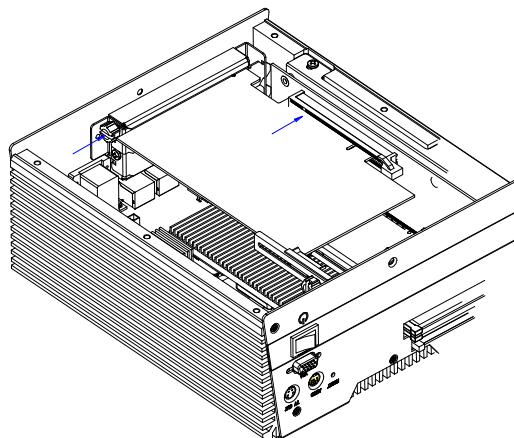

Step 3: Unfasten the six screws on the bottom lid.

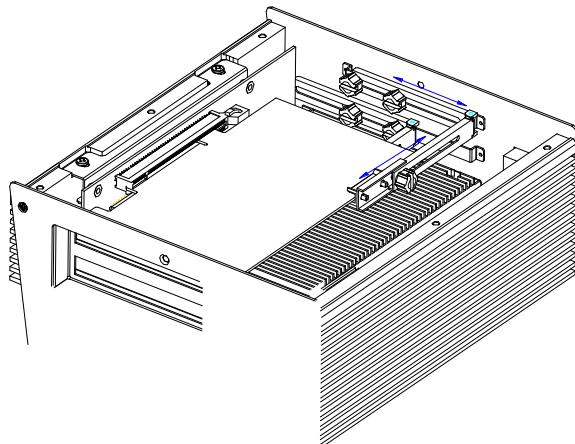

Step 4: Remove the screw with your finger and get the PCI card ready to install. You should keep the shield and screw for use later.

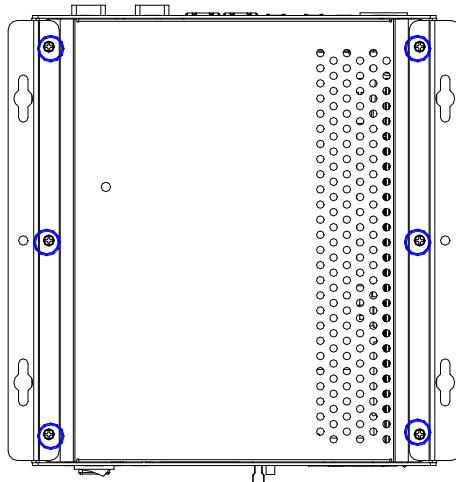

Step 5: Insert the PCI card into the PCI slot and reattach the screw.

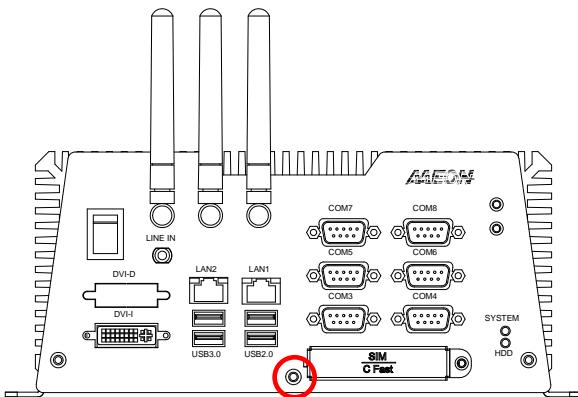

Step 6: Unfasten the screws and push the tenon to lock the PCI card in position.

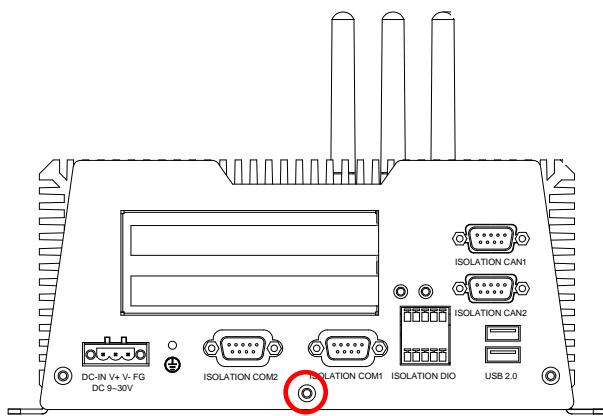

Step 7: Close the bottom lid of the AEC-6950 and fasten six screws on bottom lid.

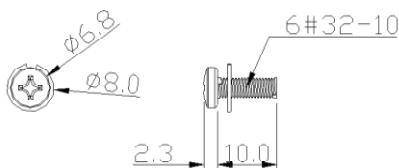

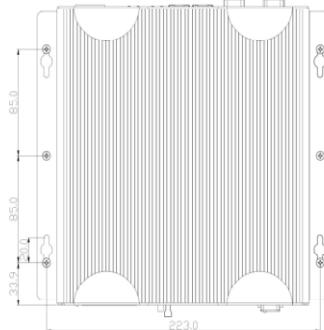

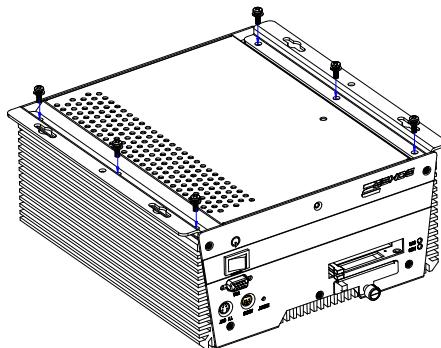

Step 8: Fasten the one screw on the front panel and one screw on the rear panel

2.31 Wallmount kit Installation

Step 1: Get the brackets ready and fasten appropriate three screws on each bracket. After fastening the two brackets on the bottom lid of AEC-6950, the wallmount kit installation is finished

AMI BIOS Setup

3.1 System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during these tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal or non-fatal. The system can usually continue the boot up sequence with non-fatal errors.

System configuration verification

These routines check the current system configuration stored in the CMOS memory and BIOS NVRAM. If system configuration is not found or system configuration data error is detected, system will load optimized default and re-boot with this default system configuration automatically.

There are four situations in which you will need to setup system configuration:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The system configuration is reset by Clear-CMOS jumper
4. The CMOS memory has lost power and the configuration information has been erased.

The AEC-6950 CMOS memory has an integral lithium battery backup for data retention. However, you will need to replace the complete unit when it finally runs down.

3.2 AMI BIOS Setup

AMI BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM and BIOS NVRAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press or <F2> immediately. This will allow you to enter Setup.

Main

Set the date, use tab to switch between date elements.

Advanced

Enable disable boot option for legacy network devices.

Chipset

Host bridge parameters.

Boot

Enables/disable quiet boot option.

Security

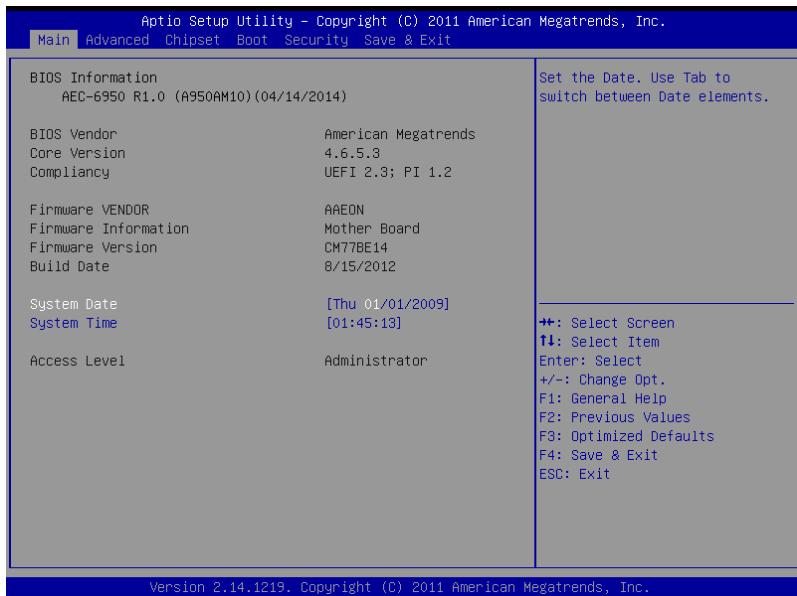

Set setup administrator password.

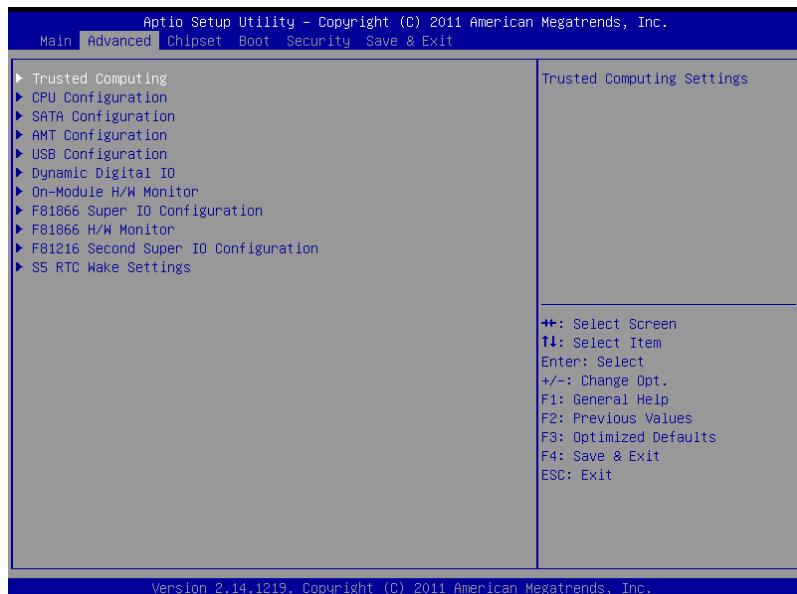

Save&Exit

Exit system setup after saving the changes.

AMT Configuration

Option summary:

Intel AMT	Disabled	Default
	Enabled	
Enables or Disables Intel(R) Active Management Technology BIOS Extension. Note: iAMT H/W is always enabled. This option just controls the BIOS extension execution, If enabled this requires additional firmware in the SPI device.		
Un-Configure ME	Disabled	Default
	Enabled	
OEMFlag Bit 15: Un-configure ME without password.		

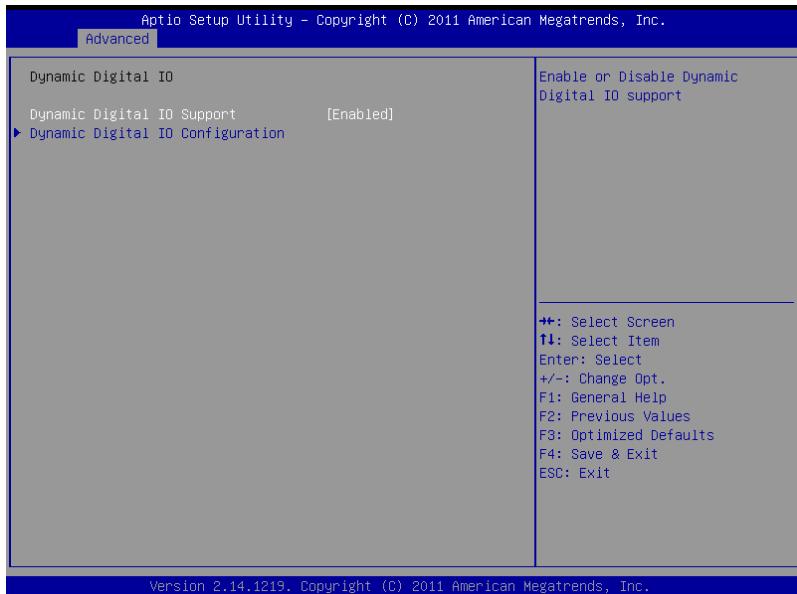

USB Configuration

Option summary:

Legacy USB Support	Enabled	Default
	Disabled	
	Auto	
Enables BIOS Support for Legacy USB Support. When enabled, USB can be functional in legacy environment like DOS. AUTO option disables legacy support if no USB devices are connected		
USB3.0 Support	Enabled	Default
	Disabled	
Enable/Disable USB3.0 (XHCI) Controller support.		

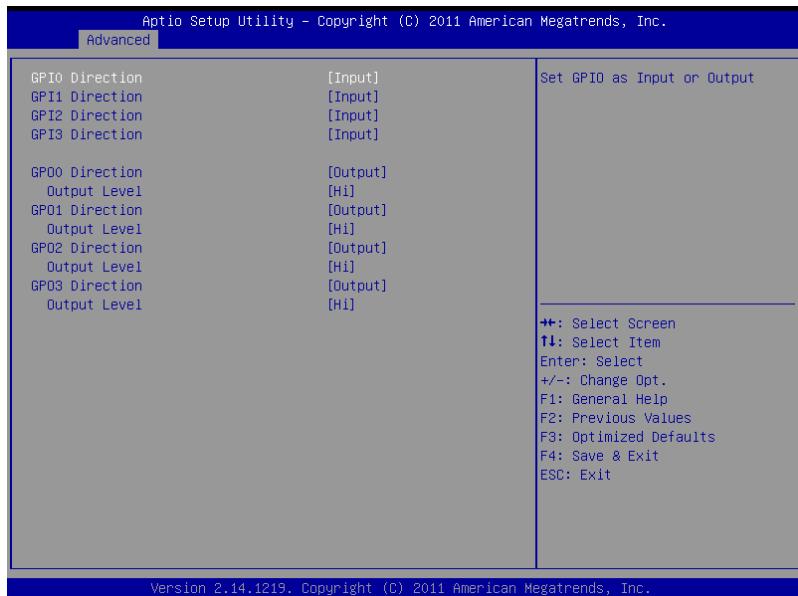

Dynamic Digital IO

Change User/Supervisor Password

You can install a Supervisor password, and if you install a supervisor password, you can then install a user password. A user password does not provide access to many of the features in the Setup utility.

If you highlight these items and press Enter, a dialog box appears which lets you enter a password. You can enter no more than six letters or numbers. Press Enter after you have typed in the password. A second dialog box asks you to retype the password for confirmation. Press Enter after you have retyped it correctly. The password is required at boot time, or when the user enters the Setup utility.

Removing the Password

Highlight this item and type in the current password. At the next dialog box press Enter to disable password protection.

Driver Installation

The AEC-6950 comes with an AutoRun DVD-ROM that contains all drivers and utilities that can help you to install the driver automatically.

Insert the driver DVD, the driver DVD-title will auto start and show the installation guide. If not, please follow the sequence below to install the drivers.

Follow the sequence below to install the drivers:

- Step 1 – Install Chipset Driver
- Step 2 – Install VGA Driver
- Step 3 – Install LAN Driver
- Step 4 – Install Audio Driver
- Step 5 – Install USB3.0 Driver
- Step 6 – Install RAID & AHCI Driver
- Step 7 – Install ME Driver
- Step 8 – Install TPM Driver
- Step 9 – Serial Port Driver (Optional)

Please read instructions below for further detailed installations.

4.1 Installation:

Insert the AEC-6950 DVD-ROM into the DVD-ROM drive. And install the drivers from Step 1 to Step 9 in order.

Step 1 – Install Chipset Driver

1. Click on the **Step 1 - Chipset** folder and double click on the **Setup.exe** file
2. Follow the instructions that the window shows
3. The system will help you install the driver automatically

Step 2 – Install VGA Driver

1. Click on the **Step 2 - Graphics** folder and select the OS folder your system is
2. Double click on the **Setup.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 3 –Install LAN Driver

1. Click on the **Step 3 - LAN** folder and select the OS folder your system is
2. Double click on the **.exe** file located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 4 –Install Audio Driver

1. Click on the **Step 4 - Audio** folder and select the OS folder your system is
2. Double click on the **Setup.exe** located in each OS folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 5 – Install USB3.0 Driver

1. Click on the **Step 5 - USB3.0** folder and select the folder of **Driver_Installer**
2. Double click on the **Setup.exe** file
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 6 – Install RAID & AHCI Driver

Please refer to the **Appendix C RAID & AHCI Settings**

Step 7 – Install ME Driver

1. Click on the **Step 7 - ME** folder and double click on the **Setup.exe** file
2. Follow the instructions that the window shows
3. The system will help you install the driver automatically

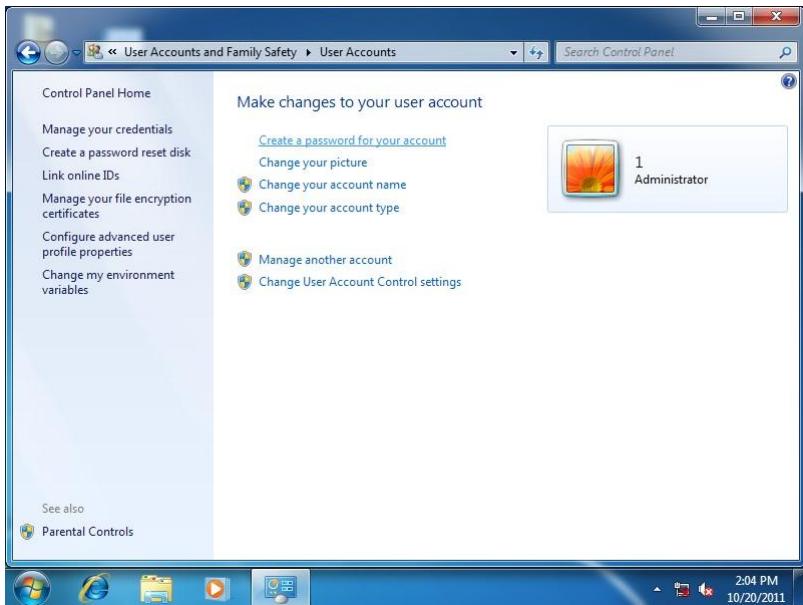

Step 8 –Install TPM Driver

1. Click on the **Step 8 - TPM** folder and select the OS folder your system is
2. Double click on the **Setup.exe** located in each OS folder

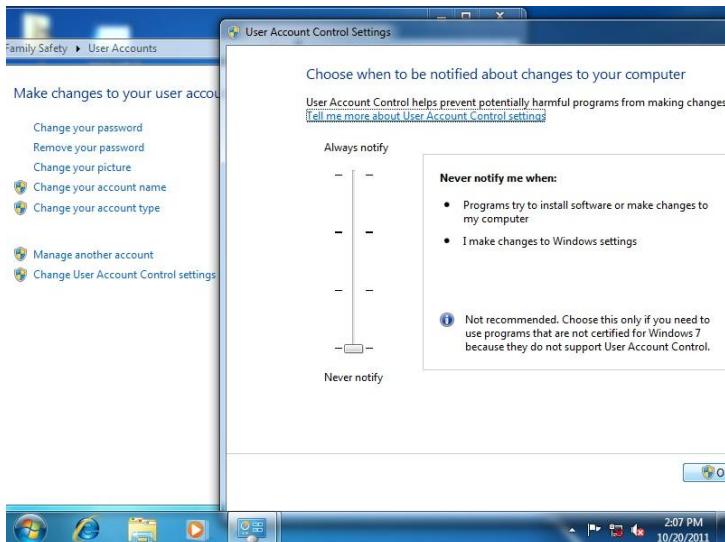

3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 9 – Install Serial Port Driver (Optional)

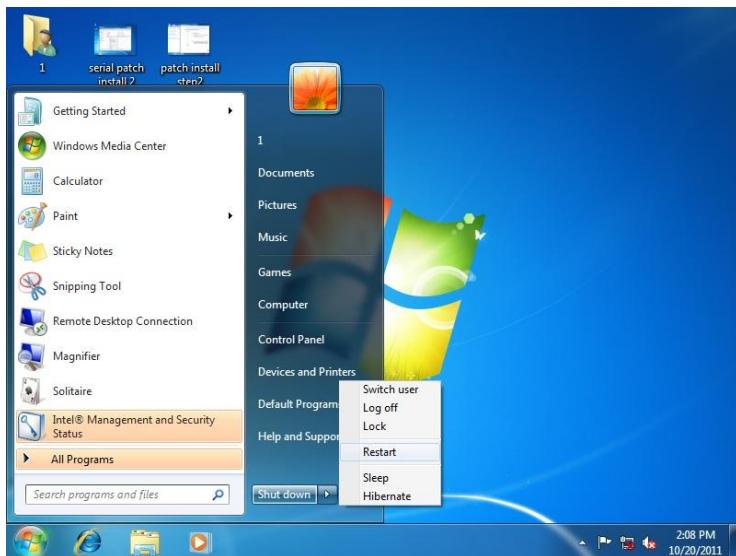

1. Create a password for Administrator account

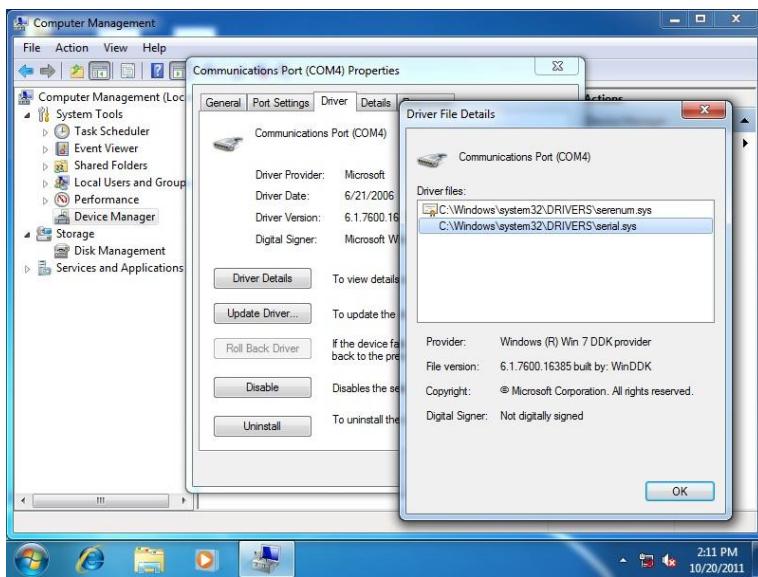

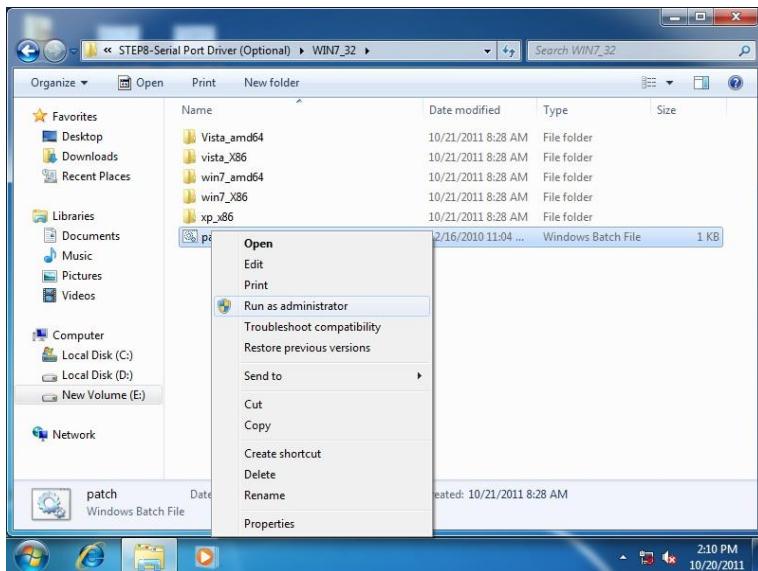

2. Change User Account Control Settings to [Never notify]

3. Reboot and Administrator login

4. To run patch.bat with [Run as administrator]

RAID & AHCI Settings

C.1 Setting RAID

OS installation to setup RAID Mode

Step 1: Copy the files below from “**Driver CD ->Step 6 - RAID&AHCI**” to

Disk

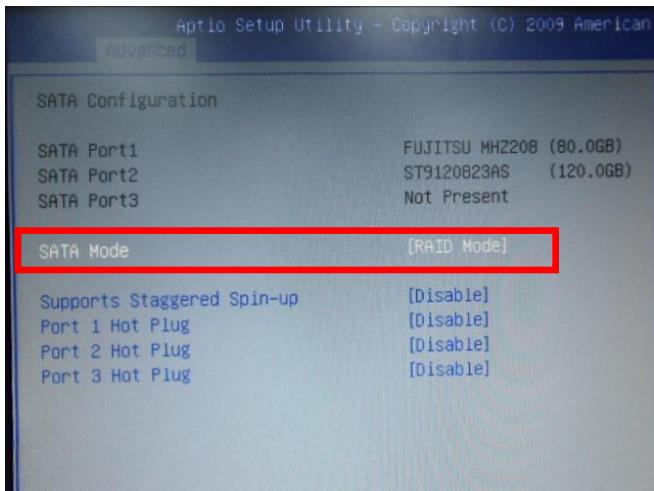

Step 2: Connect the USB Floppy (disk with RAID files) to the board

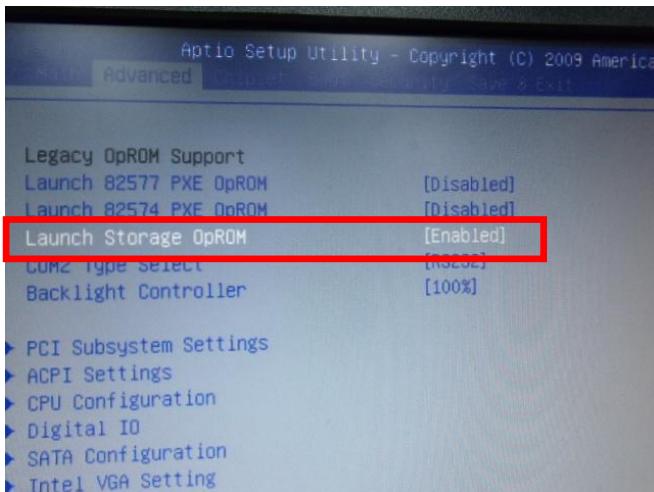

Step 3: The setting procedures “**In BIOS Setup Menu**”

A: Advanced -> SATA Configuration -> SATA Mode -> RAID Mode

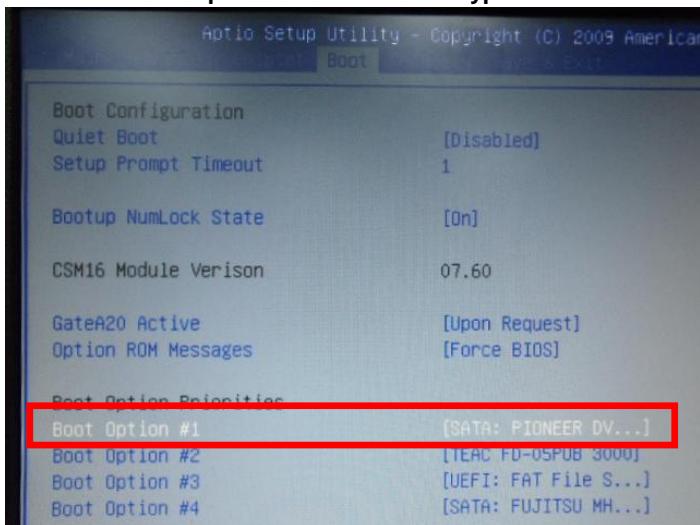

Step 4: The setting procedures “**In BIOS Setup Menu**”

B: Advanced -> Launch Storage OpROM -> Enabled

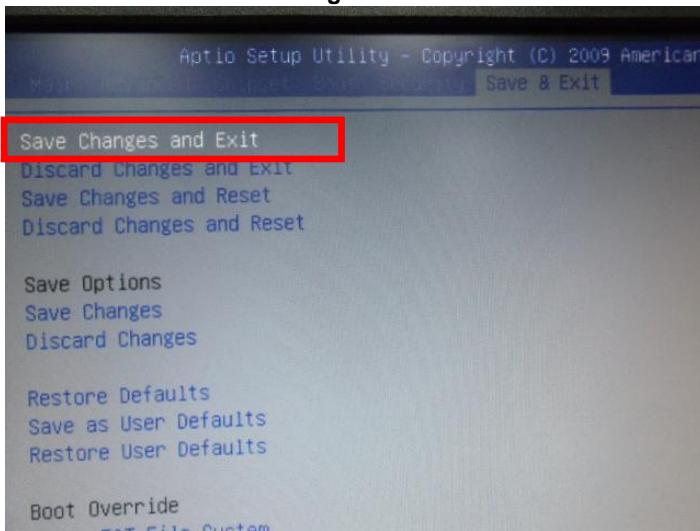

Step 5: The setting procedures “In BIOS Setup Menu”

C: Boot -> Boot Option #1 -> DVD-ROM Type

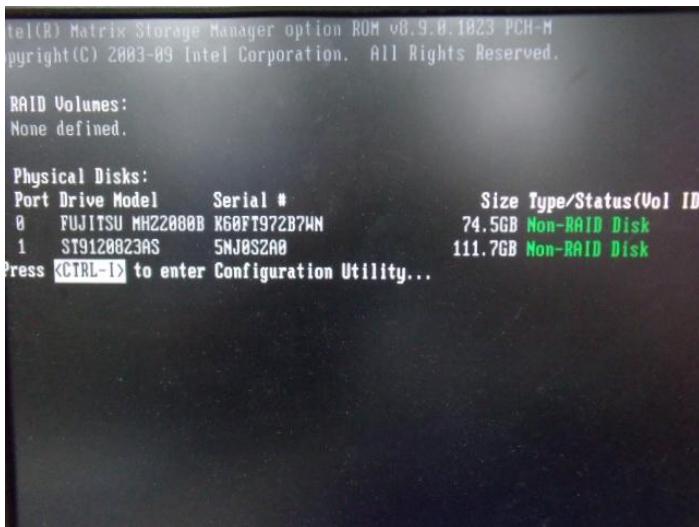

Step 6: The setting procedures “In BIOS Setup Menu”

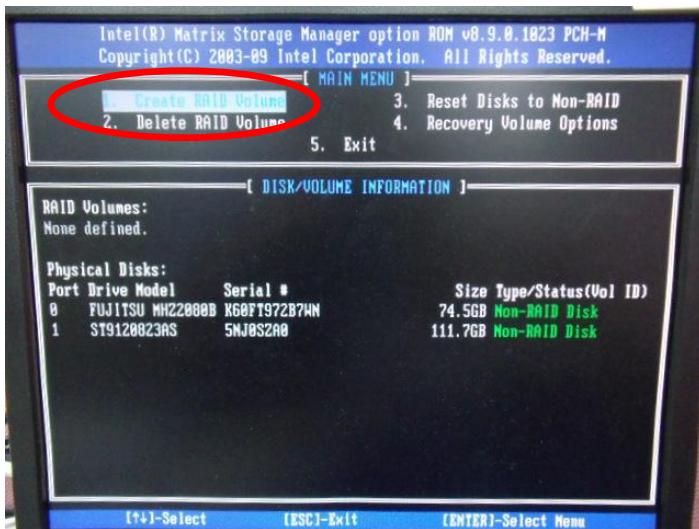

D: Save & Exit -> Save Changes and Exit

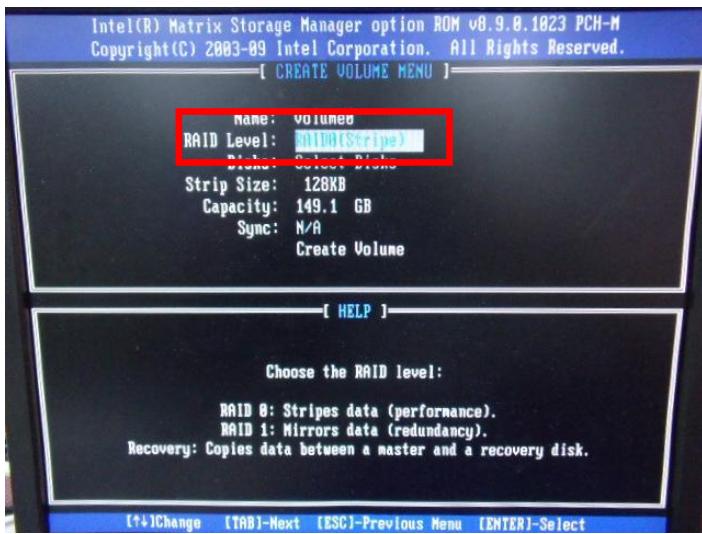

Step 7: Press **Ctrl-I** to enter MAIN MENU

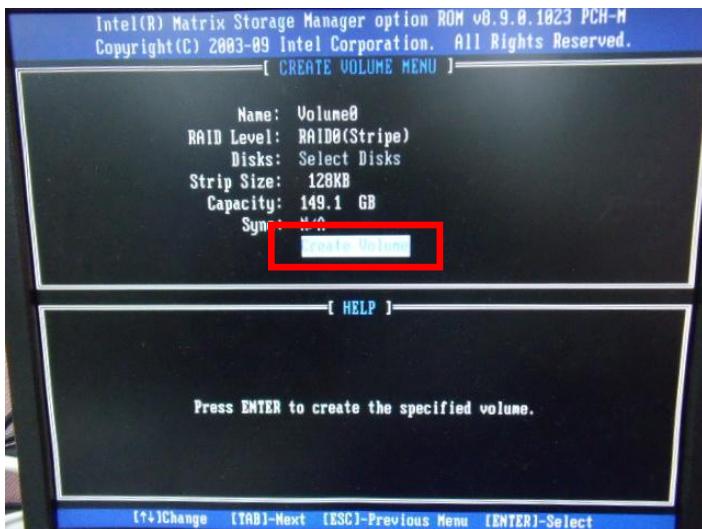

Step 8: Choose “1.Create RAID Volume”

Step 9: RAID Level -> RAID0(Stripe)

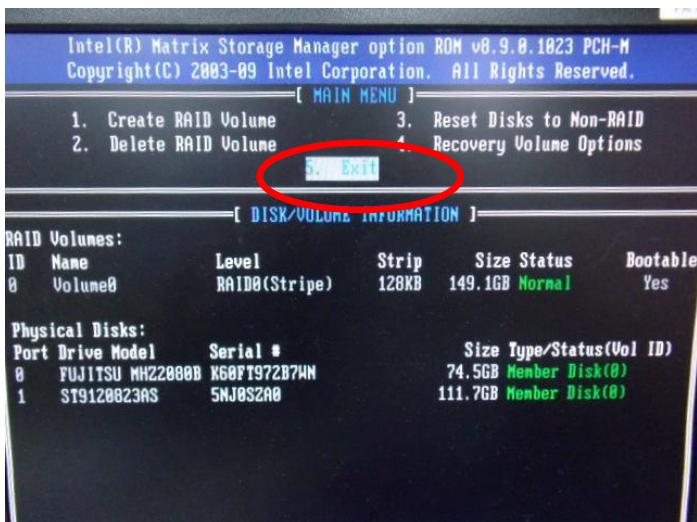

Step 10: Choose "Create Volume"

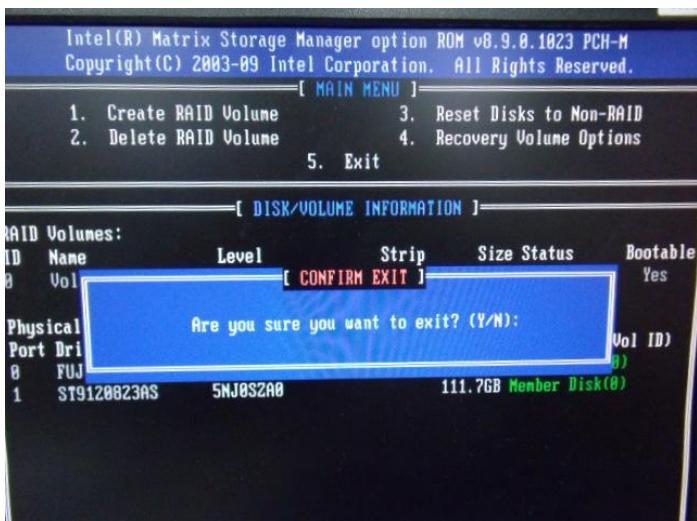

Step 11: Choose “Y”

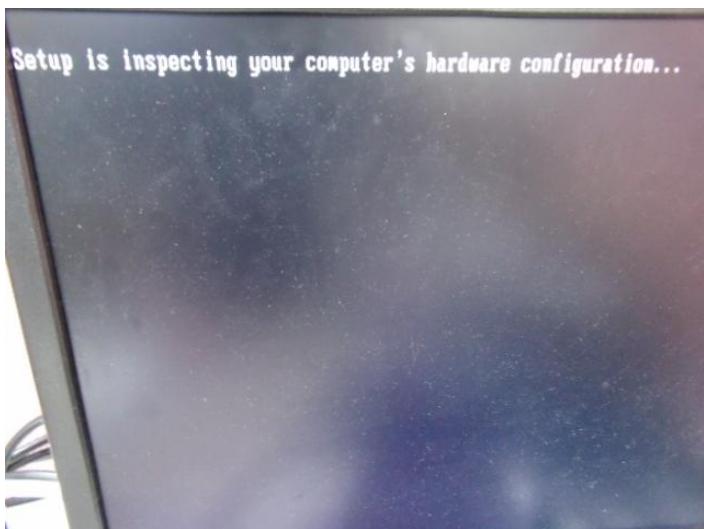

Step 12: Choose “5. Exit”

Step 13: Choose "Y"

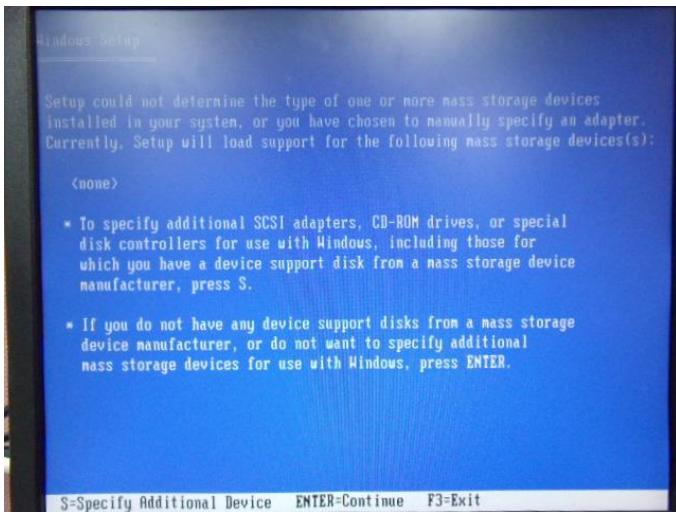

Step 14: Setup OS

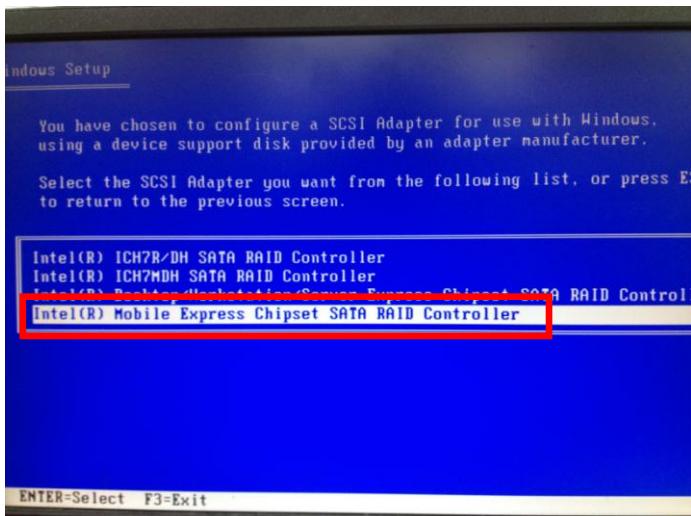

Step 15: Press “F6”

Step 16: Choose “S”

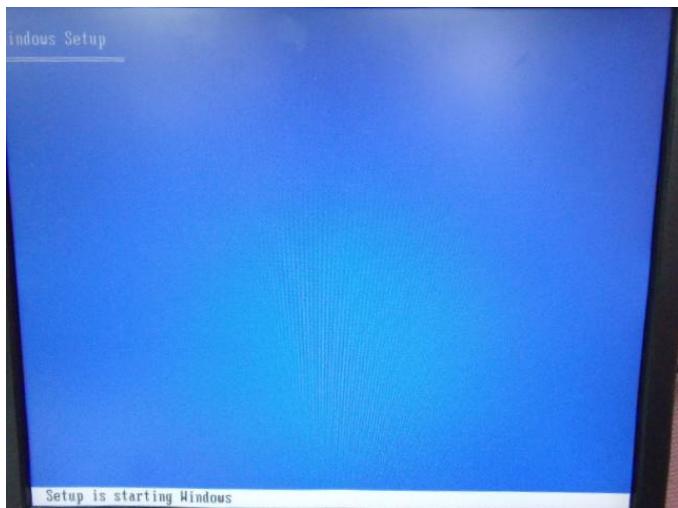

Step 17: Choose “Intel(R) Mobile Express Chipset SATA RAID Controller”

Step 18: It will show the model number you select and then press “ENTER”

Step 19: Setup is starting Windows

C.2 Setting AHCI

OS installation to setup AHCI Mode

Step 1: Copy the files below from “**Driver CD ->Step 6 - RAID&AHCI**” to Disk

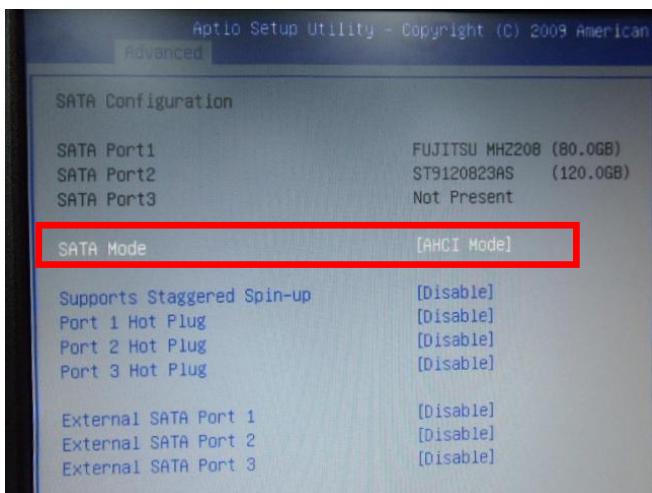

Step 2: Connect the USB Floppy (disk with AHCI files) to the board

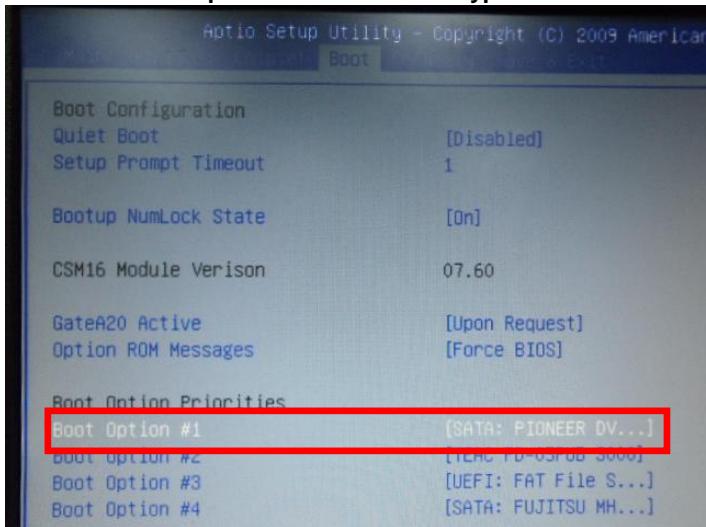

Step 3: The setting procedures “**In BIOS Setup Menu**”

Electrical Specifications for I/O Ports

D.1 DIO Programming

AEC-6950 utilizes FINTEK 81866 chipset as its Digital I/O controller.

Below are the procedures to complete its configuration and the AAEON initial watchdog timer program is also attached based on which you can develop customized program to fit your application. There are three steps to complete the configuration setup: (1) Enter the MB PnP Mode; (2) Modify the data of configuration registers; (3) Exit the MB PnP Mode. Undesired result may occur if the MB PnP Mode is not exited normally.(These three steps are the same as programming WDT)

D.2 Digital I/O Register

Table 1 : SuperIO relative register table		
	Default Value	Note
Index	0x2E (Note1)	SIO MB PnP Mode Index Register 0x2E or 0x4E
Data	0x2F (Note2)	SIO MB PnP Mode Data Register 0x2F or 0x4F

Table 2 : Digital Input relative register table					
	LDN	Register	BitNum	Value	Note
