7. TROUBLE SHOOTING

1. Only black-and-white image

Make the level of color saturation and brightness is proper.

2. Power on but no picture

Make sure the AV &VGA &HDMI&DVI cable is tightly connected from the video out connector AV &VGA &HDMI&DVI signal output connector. Make sure you are using the standard power adapter coming with the monitor.

3. Wrong or abnormal colors

If any color is missing, check the cables to make sure it is securely connected. Broken or loose pins in the cable connector can cause a bad connection.

4. Remote controller doesn't work

Check the battery to make sure the battery is installed properly and make sure it is not a low battery. The signal is interfered by some obstructions.

5. Please try to reset if any abnormal matters happened .

8. REMARK:

If there are still any problems, you can connect with the related deals

*If interruptive image occurs, it maybe that the VGA signal frequency isn't matched with normal standard

*It is a normal condition that some bright lines appear on the screen when you turn the unit.
